Your new neater, tidier, and safer way to work and play at home.

Space can be difficult to come by for makers, creators, and players at home - but that shouldn't get in the way.

The inventapod provides you with a functional work and play space at home that is both compact and portable. By using any existing table at home, you can quickly convert it into your own space whether its for Raspberry Pi, Arduino, Lego, or video games.

Made from slotted aluminium sections and laser cut acrylic sheet the inventapod is full of features so that you can keep creating.

The inventapod quickly packs away for storage in a bookshelf.

The key features of the inventapod include:

- A versatile frame made from strong and lightweight aluminium frame with a t-slot to make it easy for you to attach your components including a monitor
- A great looking work space with laser cut acrylic sheet to encase your pod and protect your things from dust and children.
- An internal power supply so that you can easily power up your project and devices with less cable mess.
- The ability to quickly pack and store into a bookshelf providing a space efficient solution for your home.

The inventapod is coming soon in 2018
